LLUMEN ASSET BUILDER

Color Palettes

Every palette in the Asset Builder's colour palette picker, with the hex value of each colour, for developers applying them in charts, maps and other visuals.

25 palettes · Generated 03 November 2026

How to apply them

- Colours are listed in order. Stop 1 is the first colour the picker assigns: the lowest value of a gradient or step scale, or the first category.
- Sequential and diverging palettes run through the listed stops in order. When a visual needs more steps than the palette has, the colours in between are interpolated from neighbouring stops.
- Categorical palettes keep their colours in order. With more categories than colours, the extras repeat the palette mixed toward white (16%), then toward #0B1220, a little more on each pass.
- Opacity palettes repeat one base colour; only the alpha changes. Use the 8-digit hex or the rgba() value.
- Hex values are written as #RRGGBB, or #RRGGBBAA where the last two digits are the alpha.

Contents

Sequential · Shades

Blue → White, Purple → White, Teal → White, Red → White, Gold → White

Sequential · Opacity

Blue → Transparent, Purple → Transparent, Teal → Transparent, Red → Transparent, Gold → Transparent
